

Instructions Showing How To Cut Cans

Take the template and wrap it around the can securing it with scotch tape, Push the template all the way down

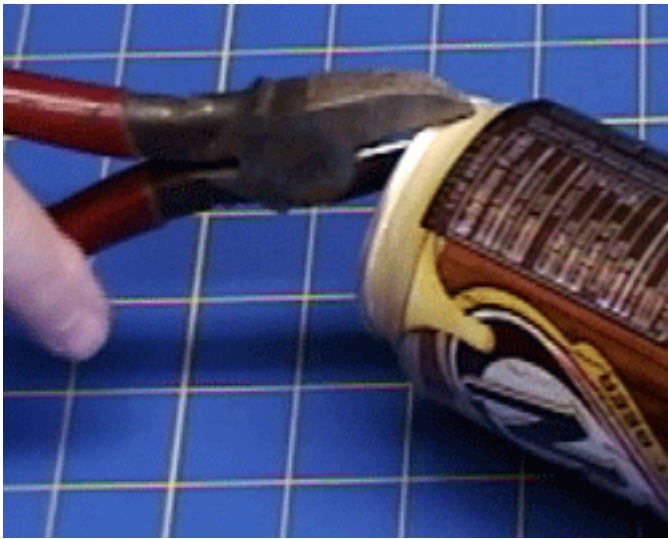

Using an ultra fine sharpie draw a line around the can.

Using a household can opener (one shown is a OXO) cut out the center of the can.

When the center is cut out it should now look like this.

Cut a V into the can using your wire cutters.

Using a standard pair of household scissors cut off the top of the can on the line you drew out.

Using a standard pair of scissors cut from top to bottom through the "Nutrition Facts".

Turn the can and cut the bottom off.

Your can should now look like this with top & bottom cut off, split down the "Nutrition Facts"
